

**BROOKFIELD RENEWABLE PARTNERS L.P.
BROOKFIELD BRP CANADA CORP.**

**Report Pursuant to the *Act to enact the Fighting Against Forced Labour and
Child Labour in Supply Chains***

May 30, 2025

Report Pursuant to the *Act to enact the Fighting Against Forced Labour and Child Labour in Supply Chains* (“Report”)

ABOUT THIS REPORT

This is a joint report by Brookfield Renewable Partners L.P. (“**Brookfield Renewable**” or “**BEP**”)¹ and Brookfield BRP Canada Corp. (“**BRP Canada**” and together with BEP, the “**Reporting Entities**”) for the financial year ended December 31, 2024, pursuant to the *Fighting Against Forced Labour and Child Labour in Supply Chains Act* (the “**Act**”). In this Report, references to “we”, “us” or “our” refer to the Reporting Entities. This is the first report for the Reporting Entities under the Act.

This Report sets out our commitments, approach and substantive policies relating to forced labour and child labour with particular reference to potential issues in our supply chain, specifically with respect to the goods and services that we purchase in order to build, operate and maintain our renewable power generation assets in Canada.

Our Commitment

As a global owner and operator of renewable energy and transition assets, Brookfield Renewable is committed to conducting business in an ethical and responsible manner that respects human rights. We are dedicated to treating stakeholders, including employees, customers, suppliers and the communities in which we operate, with dignity and respect. Our commitment to human rights is consistent with our sustainability principles, which include implementing policies and procedures aimed at ensuring the well-being and safety of employees, mitigating the impact of our operations on the environment, upholding strong governance practice, and being good corporate citizens in the communities in which we operate.

OUR STRUCTURE, ACTIVITIES AND SUPPLY CHAIN

Our Business

Brookfield Renewable is one of the world’s largest investors, developers, owners and operators of clean power and decarbonization assets, with approximately 46,200 megawatts of generating capacity² globally and nearly 2,000 megawatts of clean energy capacity in Canada, including hydroelectricity, wind, and solar. BRP Canada holds Brookfield Renewable’s Canadian operating assets.

For more information on Brookfield Renewable’s structure, activities and strategic direction, please refer to our [Annual Report](#) and our [Sustainability Report](#) on our website.

¹ BEP is an exempted limited partnership established under the Bermuda Exempted Partnerships Act 1992 (as amended) together with the Bermuda Limited Partnership Act 1883 (as amended). BEP’s limited partnership units are listed on the Toronto Stock Exchange (BEP.UN). BRP Canada is incorporated under the Business Corporations Act (Ontario).

² This represents total generating capacity on a 100% basis for our investments, and includes operating renewables facilities that we own, operate or own an economic interest in. It also includes business transformation and cogeneration assets.

Our Supply Chain

Brookfield Renewable's core supply chain focuses on the development and construction of new renewable energy assets, and the operation and maintenance ("O&M") of our existing operating assets. Therefore, our core suppliers include major equipment, construction and O&M vendors, and their respective supply chains, which involve multi-tiered international streams with mined materials and manufacturing processes.

GOVERNANCE AND POLICIES

We recognize that strong governance is essential to sustainable business operations, and we aim to conduct our business according to the highest ethical and legal standards. Our approach to addressing forced labour and child labour is designed to be commensurate with the risks we face, which vary based on several factors, including jurisdiction, industry and sector.

Our established policies and processes promote sound governance practices, high ethical standards and a culture where employees and other stakeholders can share any concerns. All of our directors, officers, employees and temporary workers must comply with our Code of Business Conduct and Ethics (the "**Code**") and our Human Rights Policy as well as all relevant policies and processes

Our Human Rights Policy sets out our approach to respecting fundamental human rights. It outlines our commitments with respect to the elimination of forced or compulsory labour and the abolition of child labour. Our Human Rights Policy supports the Code, which governs and reinforces the application of our commitments to human rights.

Brookfield Renewable's board of directors (the "**Board**") oversees our corporate sustainability policies, including our Human Rights Policy, which govern our programs and strategy. Additionally, senior leadership of our operating businesses formally reviews and discusses our strategy related to human rights as part of our Sustainability Steering Committee, and we update the Board on our sustainability strategy and performance on a quarterly basis. Our internal audit program is also regularly refreshed in line with the evolving sustainability landscape to ensure we have appropriate self-evaluations and verify conformance with our sustainability policies and principles, including those related to human rights, forced labour and child labour.

Our Vendor Code of Conduct (the "**Vendor Code**") sets clear expectations for vendors to comply with applicable laws and regulations, respect and support human rights, and maintain processes to identify and prevent adverse human rights impacts that could arise from their own or their supply chain's operations. We also work directly with our suppliers to encourage them to enhance their processes on managing forced labour and child labour risk, conduct assessments and audits, and drive traceability and diversification within the supply chain. We monitor compliance with, and maintain the right to, periodically audit vendors against the Vendor Code and provide an ethics reporting hotline for anonymous reporting of any concerns or potential violations. The Vendor Code is reviewed and, if necessary, updated annually to support alignment with evolving best practices, particularly regarding human rights and child or forced labor issues. All suppliers are required to abide by the principles of our Vendor Code and are screened according to our Bribery and Corruption Third-Party Guidelines.

FORCED LABOUR AND CHILD LABOUR RISKS IDENTIFICATION AND MANAGEMENT

As our business continues to grow, we are committed to respecting human rights along our value chain. To assess and manage such risks, we set up systems and processes to support the identification and prevention of potential human rights risks and impacts throughout the lifecycle of our investments including at the earliest stages and within our supply chain.

We regularly enhance our approach, track and assess the effectiveness of our policies and procedures in relation to respecting human rights, and update them as required. In line with the UN Guiding Principles on Business and Human Rights, we conduct human rights assessments of our global business activities. Our first assessment was made in 2022 in partnership with a third-party sustainability consultancy. The assessment reviewed our potential human rights risks and impacts across our business activities and supply chain. It looked at our systems, policies and practices that serve to identify, prevent, mitigate and respond to these risks. The assessment identified our salient human rights opportunities and risks within our supply chain, including occupational health and safety, labour rights and forced labour and security practices, especially in higher risk jurisdictions. In particular, the assessment identified risks of forced labour within the solar power supply chain. We regularly review and confirm the assessment and its results.

To mitigate these potential risks, we have developed Supply Chain Sustainability Due Diligence Guidelines which help us to understand supplier-related sustainability strengths and risks, including incorporating forced labour and child labour considerations into our procurement processes. Due diligence is carried out on material contracts and includes assessing forced labour and child labour risks both with our direct suppliers as well as within the upstream supply chain. We look to whether a vendor has a supply chain either directly or indirectly sourcing from high human rights risks countries according to the 2023 Global Slavery Index, as well as a particular focus on and additional considerations for vendors within the solar panel supply chain. We recognize that each of our suppliers has its own supply chain, and our vendor assessments consider this risk where appropriate and possible.

Our global procurement team is vital to supporting our sustainability strategy by aligning operating businesses and engaging with key suppliers on sustainability issues. Through global spend reporting, we identify and track our largest strategic suppliers, enabling us to negotiate framework agreements and pursue sustainability initiatives worldwide. Regional leads manage local supplier relationships and contracts and align these with our sustainability goals.

Our 100-day onboarding process for new acquisitions ensures sustainability-related procurement standards and policies are adopted early.

Through our internal global Sustainable Supply Chain Working Group, which consists of procurement and sustainability professionals from our operating businesses around the world, we discuss best practices, monitor performance against our goals, solicit regular feedback from our operating businesses, and seek opportunities for improvement on sustainability topics related to the supply chain, including human rights.

Our engagement with suppliers includes tracking Health, Safety, Security, and Environmental (HSS&E) performance and encouraging suppliers to map their supply chains for child and forced labor risks, conduct assessments and audits, and promote traceability and diversification.

We also engage with industry associations, partners and customers to understand their evolving needs and to support the continued evolution of sustainability in supply chains within the clean energy space.

Senior Management in our operating businesses and at the corporate level is accountable for implementation of our policies and processes, and these efforts are overseen by our Board.

GRIEVANCE AND ACCESS TO REMEDY

We have not found any evidence of forced labour or child labour.

We have established an ethics reporting hotline (the “**Hotline**”) for employees, vendors, partners, community members and other interested stakeholders to anonymously report any concerns or raise any issues, including any that are related to human rights, free of discrimination, retaliation or harassment. Any investments or operating businesses that do not participate in our Hotline must operate an independent hotline for stakeholders. Our Hotline, independently hosted and operated by a third party, is available 24/7 in multiple languages, and we regularly communicate with our employees to ensure they are aware of the Hotline. We investigate all reports in compliance with applicable laws as necessary.

Operating businesses maintain their own local grievance-management mechanism to address concerns at the local level, including those related to human rights. We communicate the details of these channels to stakeholders and partners, either through our website, operating businesses’ websites, or in direct communication.

All grievances reported through these channels are carefully reviewed and, where appropriate, responded to. In the event that we identify that we have caused or contributed to an adverse human rights impact, we take appropriate action to mitigate or remedy the impact. When doing so we will consider all the relevant circumstances of the case including, but not limited to: (i) the extent to which Brookfield Renewable has directly caused or contributed to the impact, (ii) Brookfield Renewable’s ability to influence the mitigation or remedy of the impact, and (iii) any wider consequences which may flow from Brookfield Renewable’s action.

We promote remediation and will not impede lawful access to judicial process nor retaliate against those who have exercised their rights to raise grievances.

Partnering for Change

We oppose the use of forced labour from within the solar supply chain, support raising awareness of the issue of forced labour in the solar supply chain. We proactively engage with stakeholders, including our suppliers, local communities and Indigenous Peoples, aiming to create shared value.

Through engagement and local assessments, we aim to identify, avoid, prevent, and mitigate potential human rights risks.

Through solar industry associations, we are working to improve transparency and traceability, sharing emerging practices and innovative ways of working to prevent forced labour such as the adoption of an industry-wide traceability protocol to identify the source of primary raw materials and inputs, and track their incorporation into finished solar panels. For example, we are a signatory to the Solar Energy Industry Association's Solar Industry Forced Labor Prevention Pledge, alongside our suppliers, as well as supporting Solar Power Europe's Solar Stewardship Initiative's Supply Chain Traceability Standard.

We are continuously enhancing our approach to addressing human rights in our supply chain and monitor and assess the effectiveness of our human rights program by regularly engaging with key stakeholders and refining the program, as necessary.

EMPLOYEE TRAINING

We provide regular training on our Code and wider training and communications to relevant employee groups in line with their roles and responsibilities, including Anti-Bribery Anti-Corruption (ABC), Health, Safety, Security and Environmental (HSS&E) training and Supply Chain Due Diligence training.

Additionally, we conduct regular training and certification on the Code for all employees.

We have developed general human rights training for all employees. We also conduct required focused training on specific human rights issues for select employees in certain disciplines, as required.

MEASURE OF EFFECTIVENESS

We acknowledge that there are potential forced labour and child labour risk within our supply chain, in particular within the solar panel supply chain. As described in this Report we have established formal policies and process that govern our identification, assessment and mitigation of human rights risk and access to remedy. We consistently review this process, utilizing our governance structure to review the effectiveness of our program and use the controls of our approval processes to ensure that these are carried forward. We also regularly engage with our internal and external stakeholders on this topic and have clear communication around our policies and access to grievance management mechanisms. We are also committed to transparency throughout our disclosure and within this Report.

PROCESS OF CONSULTATION

Brookfield Renewable took a cross-functional approach to preparing and drafting this Report. A consultation process was undertaken. The Board and the board of directors of BRP Canada were given an opportunity to consider and provide comments on the Report.

ATTESTATION

Pursuant to section 11(4)(b)(i) of the Act, this Report was approved by the board of directors of Brookfield Renewable's managing general partner and the board of directors of BRP Canada.
