1. CEO's message

Sustainability is a key strategic priority for Metso. We believe that it is our industry's responsibility to continue the transition to more sustainable operations, and Metso aims to lead the way in this field. Sustainability is embedded in Metso's strategy and Code of Conduct, reflecting our dedication to globally recognized guidelines and disclosure frameworks.

We enable the positive change in our industry by supporting our customers in their climate and other sustainability targets, where we can create the biggest impact. This includes decreasing our own environmental footprint substantially, with an aim to reach net zero in our own operations by 2030. Our sustainability commitment also includes adherence to safe operational and fair employment practices in our supply chain, conducting ongoing supplier due diligence, risk identification, as well as monitoring and reviewing the climate change actions taken by our suppliers.

We do not accept any form of compulsory, forced, or child labor, slavery or human trafficking, unlawful employment terms, unsafe working conditions, or unlawful environmental impacts within our own operations, including in investment decisions related to mergers, acquisitions, and divestments. We also have zero tolerance for any such activity in our supply chain and we are committed to working for elimination of any such practices.

We are proud to present our Modern Slavery Statement 2024. Please do not hesitate to contact us with any queries or other feedback.

Espoo, Finland
February 12, 2025

Sami Takaluoma
President and CEO

2. Introduction

Metso's Modern Slavery Statement is published to reflect the requirements of the Australian Modern Slavery Act 2018, the United Kingdom's Modern Slavery Act 2015, the Norwegian Transparency Act 2021, the Californian Transparency in the Supply Chains Act as well as the Canadian Act to enact the Fighting Against Forced Labour and Child Labour in Supply Chains Act and to amend the Customs Tariff ("Canadian Modern Slavery Act") 2023. This statement covers the period from January 1, 2024, to December 31, 2024.

Metso Corporation is a publicly listed company with shares traded on the Nasdaq Helsinki. Metso operates in approximately 50 countries. This statement covers the Metso entities set out in section 4 of this statement. Metso reports its economic, social and environmental performance annually in accordance with the

3. Organization

Metso is a frontrunner in sustainable technologies, end-to-end solutions, and services for the aggregates, minerals processing, and metals refining industries globally. Metso employs around 17,000 people, operating in approximately 50 countries.

Metso, headquartered in Espoo, Finland, has two customer and financial reporting segments:

- Aggregates, serving quarry and contractor customers by offering crushing and screening equipment to produce aggregates needed in construction and infrastructure projects.
- Minerals, serving mining industry customers by providing equipment and plant for minerals processing, and hydrometallurgical and pyrometallurgical solutions for the recovery of metals.

Within these segments Metso operates through business and market areas. Metso has a market- and customer-specific supply chain network, with manufacturing optimized between in-house operations and purchases from suppliers.

The Minerals business area offers capital equipment for mining and metals refining as part of the Minerals segment. The Aggregates business area offers capital equipment to that segment. Metso has two aftermarket business areas serving both segments: Services, providing spare parts, refurbishments, repairs and professional

services; and Consumables, providing a comprehensive offering of wear parts.

The business areas are accountable for their own performance in terms of orders and sales, operating profit and capital employed, and they contribute to the company's strategy through their business-specific initiatives.

In addition to the business areas, Metso has seven market areas. The business areas, together with market area teams, are responsible for managing customer relationships. Market areas ensure effective cooperation between global and local activities based on clear roles and governance. The market areas are North and Central America, South America, Europe and Central Asia, Africa, Middle East and India, Greater China, and Asia Pacific.

A significant share of sales in the Aggregates business is through distributors. The management and development of the global Metso brand distributor network is the responsibility of a separate distribution management organization (DMO). The Aggregates business consists of products sold under the Metso brand, and an additional product portfolio sold under Diamond Z, Jonsson, Lippman, McCloskey, McCloskey Environmental, MWS Equipment, Screen Machine Industries, Shaorui, Tedd Engineering and Tesab brands. For more information on the markets in which Metso operates, please see Metso's Annual Report 2024 entity including Business Overview and Sustainability statement for 2024 in the Financial Statements' Board of Directors report.

Metso Corporation's shares are listed on the Nasdaq Helsinki.

This statement covers the following Metso legal entities in Australia, Canada, Norway, the United Kingdom and the United States:

Australia

- Metso Australia Pty Ltd
- Metso Outotec Metals Australia Pty Ltd
- Outotec Pty Ltd
- Brouwer Engineering Pty Ltd

- McCloskey International Ltd
- Metso Capive Insurance Limited
- Metso UK Ltd
- Outotec (USA) Inc. UK Branch
- Tesab Engineering Ltd
- Tedd Engineering Ltd

USA

- Metso USA Inc.

4. Supply chain

Suppliers are valuable partners for Metso. Metso works closely with its suppliers to ensure a socially, environmentally and economically responsible value chain.

Due to the cyclical nature of its customer industries, Metso outsources a significant proportion of its manufacturing. Metso purchases various materials, goods and services globally, and has a supply base of around 7,000 direct suppliers (purchases for goods and services offered by Metso) as well as around 11,000 indirect suppliers (purchases for the operation of Metso's business). In total, we have over 18,000 suppliers in around 100 countries.

Metso's total procurement spend in 2024 was approximately EUR 3.1 billion. The purchases include materials and services for Metso's own manufacturing operations as well as goods and services for Metso's project deliveries. Metso acknowledges that many suppliers themselves rely on their own supply chain.

About 12% of Metso's spend with direct suppliers in 2024 consisted of purchases from its 10 largest suppliers. Our most significant operations, based on spend volume, are in Finland, United States, Brazil, China, India, Chile, Germany, Australia, Sweden and Mexico (89%). We define 'local supplier' as sourced from the same country as the plant or location and significant locations of operation' as the biggest countries for Metso procurement.

Our spending on suppliers that are local to the purchasing operations in 2024 amounted to 72% of our total supply spend. The main spend categories in 2024 were components, metal fabrications, casting and forgings, direct external services, raw material, equipment and systems as well as electrical and automation.

Metso is committed to supporting local communities where it operates through local sourcing where economically and technically feasible, through training and recruitment of local people as well as by supporting local economic development.

About 12% of Metso's spend with direct suppliers in 2024 consisted of purchases from its 10 largest suppliers.

5. Risk assessment

Risk management is an integral part of Metso's management system and internal control framework. Risk management aims to assess risks in a systematic way to facilitate planning and decision-making. Risk management covers all parts of the organization and captures strategic, financial and operational risks.

Potential risks related to modern slavery and human rights are assessed for Metso's own operations and project deliveries as well as for its supply chain. These risks are classified by country based on assessments by reputable organizations and by category, with more detailed due diligence required for high-risk categories, such as facility and construction site services, raw materials, electronics as well as labor hire and temporary contract employment. More information in Section 7 about Metso's due diligence and risk identification, avoidance and mitigation measures.

Metso continues to develop its risk-classification process. Metso has not identified any modern slavery cases in its own operations and was not aware of any modern slavery cases in its supply chain during 2024. Accordingly, Metso has not taken remediation measures and does not currently have a compensation plan for vulnerable families suffering the consequences of forced labor or child labor. Metso keeps track of needs and developments in this area.

In 2024, Metso continued to develop its risk-classification process.

6. Policies

Metso's approach to modern slavery is guided by the Metso Code of Conduct, Human Rights Policy, and Supplier Code of Conduct, as well as by Metso's commitment to the Ten Principles of the United Nations Global Compact initiative, the United Nations Guiding Principles on Business and Human Rights and the International Labour Organization's (ILO) Declaration on Fundamental Principles and Rights at Work.

Metso does not accept any form of compulsory, forced or child labor, slavery or human trafficking, unlawful employment terms, unsafe or unlawful working conditions or unlawful environmental impacts within its own operations, and has zero tolerance for any such activity in its supply chain.

The Metso Human Rights Policy sets out in more detail Metso's commitment and approach to human rights. The Policy was approved by the Board of Directors in 2022 and revised in 2023 based on a high-level human right impact assessment. In accordance with the policy, Metso's Human Rights Working Group defines the annual plan for Metso's human rights work, which is approved by Metso Leadership Team.

Our Supplier Code of Conduct sets the standards that we expect our suppliers to follow. The Supplier Code of Conduct is the starting point for any new or existing supplier relationship and includes a strict requirement to comply with Metso's approach to modern slavery as set out above. To be accepted as Metso's supplier, suppliers must agree to our Supplier Code of Conduct. Supplier Code of Conduct was revised in 2024 in alignment with Metso's Human Rights Policy and certain new regulatory requirements.

7. Due diligence

Metso applies due diligence and risk identification, avoidance and mitigation measures related to modern slavery, in addition to managing and enforcing the policies set out in section 4, through a range of internal controls and Metso's whistleblower line.

7.1. Sustainability risk mapping

Sustainability risk mapping within the existing supplier base enables a focus on suppliers with the highest potential risks in their operations. The risk mapping is based on country-level supplier assessment of the following categories: child labor, forced or involuntary labor, discrimination in the workplace, rule of law, corruption risk Index, respect for property rights, freedom of association and collective bargaining index, health and safety risk as well as environmental regulatory framework. Supplier sustainability audits are conducted in high-risk countries both by Metso procurement teams and a third-party auditor.

7.2. Supplier assessments

New supplier assessments form part of Metso's procurement function's ongoing processes, with a target to evaluate all new direct suppliers in high-risk countries against Metso's sustainability criteria.

Based on the assessments of existing and new suppliers, the need for third-party or internal supplier sustainability audits as well as any further actions are defined. Human and labor rights, environmental and safety practices, compliance with laws and regulations, and anti-bribery are included in the scope of third-party supplier audits, supplier self-assessments, as well as Metso's internal supplier sustainability audits.

After a sustainability audit has been performed, the supplier is provided with the audit findings. The supplier must implement an action plan to rectify the findings and report on its progress to Metso, and the supplier is then subject to possible re-audits. Furthermore, in cases where the third-party audit result for a supplier is unsatisfactory, the supplier is re-audited the following year. In 2024, supplier audit findings mainly related to scope for improvements in the field of health and safety. Other human rights findings included: overtime hours exceeding local legislative norms, lack of a worker's representative as required by local legislation, lack of written annual leave policies, employees having to pay themselves for the work-related health examinations. 61% of these findings were corrected on schedule by the audited supplier in 2024.

7.3. Compliance assessments and suspected misconduct

Metso also conducts compliance assessments of its suppliers and other business partners through third-party screening tools and portals that are linked to Metso's supplier data management systems. Following such screenings, any specific corrective action plans required are agreed on with the supplier and are followed up within the agreed time schedule. Significant aspects that could not be rectified will lead to a potential supplier not being considered by Metso.

Metso's general conditions of purchasing include specific compliance requirements, including requirements related to modern slavery; any breach of such requirements by the supplier entitles Metso to terminate the relevant contractual relationship with immediate effect. Committing to Metso Supplier Code of Conduct is part of Metso's supplier onboarding process.

All Metso employees are encouraged to report suspected misconduct to their own supervisors, to other management or directly to the Compliance or Internal Audit functions. Additionally,

Metso employees or any external party can report suspicions of misconduct confidentially via the anonymous Whistleblower channel, which is maintained by an independent third party. Reports can be submitted anonymously online, by phone or by email, in several languages. Suspected misconduct is investigated thoroughly and confidentially without undue delay. Metso's Compliance function determines how the matter will be investigated and reports the alleged misconduct to the Board's Audit and Risk Committee. To ensure effective and efficient investigation and remediation, the roles and responsibilities regarding evaluation, investigation and remediation are defined in Metso's internal procedure. Metso is committed to remediation and to implement relevant improvement actions to prevent re-occurrence. The Legal & Compliance and Human Resources functions implement any resulting measures.

7.4. Focus areas

In 2025, Metso plans to further improve human rights governance and due diligence processes. The focus areas to enhance Metso's human rights due diligence across the value chain in 2025 will include:

- reviewing its current policies and communication practices, assessing its grievance mechanisms,
- enhancing due diligence governance in its own operations by increasing awareness and capabilities globally and harmonizing external workforce management, and
- further developing and implementing risk-based due diligence and human rights risk assessments for supply chain sustainability for example by reviewing supplier onboarding and monitoring processes.

8. Effectiveness assessment

Metso regularly reviews and constantly aims to improve the effectiveness of its modern slavery approach. Such reviews include the investigation, assessment and actioning of reports and information received through the Metso whistleblower line, the review and assessment of legislative developments in Australia, Canada, EU, Norway, the United Kingdom, USA, and other jurisdictions and the assessment and actioning of supplier sustainability audits and compliance reviews, depending on the assessment of the risk for specific suppliers and/or countries.

Metso is transparent in communicating its approach, goals and actions related to sustainability. Achievements, including performance against key performance indicators, are reported in Metso's annual reports and extracts are provided on the Metso website.

In 2024, 179 supplier sustainability audits that included human rights topics were conducted. To create awareness of the requirements of the Supplier Code of Conduct, Metso offers supplier training related to supplier sustainability expectations, including on human rights and modern slavery.

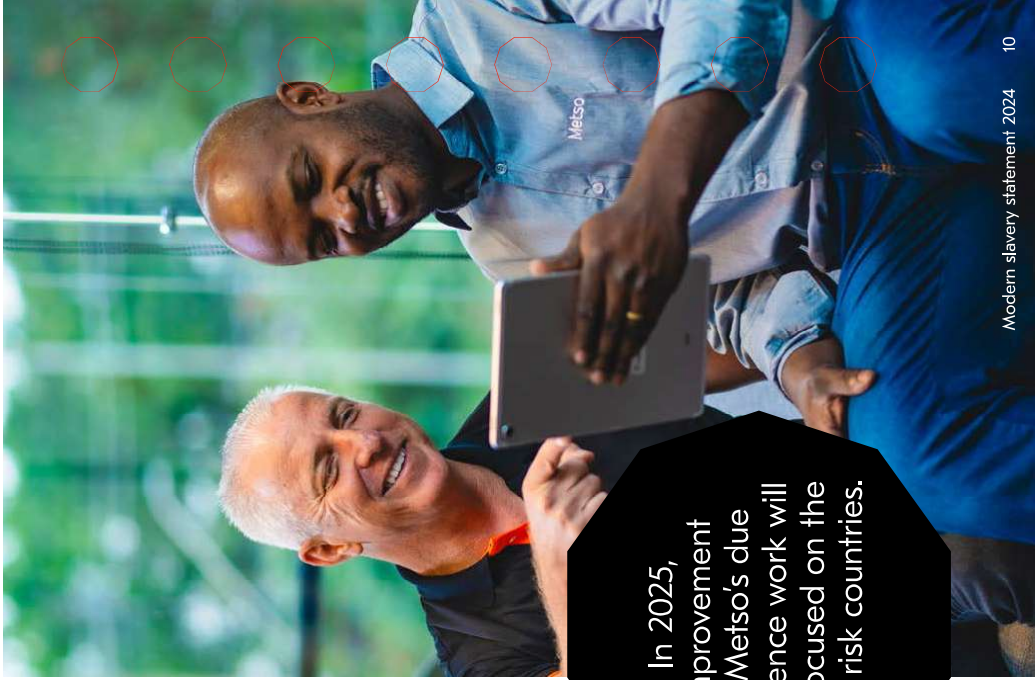

At the end of 2024, 93% of Metso's suppliers by spend have signed the Metso Supplier Code of Conduct.

Metso's mandatory Code of Conduct training, which includes aspects related to modern slavery and human rights, is carried out annually. By the end of 2024, 99,0% (2023: 99,4%) of employees have completed the training globally. Code of Conduct training is also a mandatory part of onboarding for all new employees.

In a high-level human rights impact assessment conducted in 2023, Metso assessed its existing human rights due diligence process and risks as well as identified human rights focus areas as health and safety, and prevention of discrimination and harassment throughout the value chain. In addition, secure employment, working time, adequate wages, freedom of association and collective bargaining, as well as prevention of forced labor were identified as priority areas.

In 2024, Metso has placed a risk-based focus on its supply chain with regards to human rights by, for example, conducting supplier audits in the high-risk countries.

In addition, Metso has trained and increased internal awareness about the human rights in targeted compliance trainings for procurement. In 2025, the improvement of Metso's due diligence work will be focused on the high-risk countries. Metso acknowledges that its human rights impacts may change over time, and therefore embedding human rights due diligence across the business will be an ongoing process.

In 2025, improvement of Metso's due diligence work will be focused on the high risk countries.

9. Stakeholder engagement

Continuous interaction with stakeholders — entities or individuals that have an impact on Metso's business or are affected by Metso's activities, products and services — is important in defining and adapting Metso's approach to sustainability, including human rights. Active dialogue with stakeholders aligns social, environmental and governmental practices, enhancing decision-making and accountability for all parties involved.

Metso has active discussions with many of its customers to support them in reaching their sustainability targets and works with customers to make improvements to their processes, products and operations. Metso collaborates with customers in developing new sustainable technologies. Metso also carries out co-funded community projects in collaboration with its customers. Metso strives to develop a shared understanding with suppliers in the areas of innovation, cost efficiency, quality and sustainability to manage risks related to outsourcing. Metso's approach to responsible supply chain management is rooted in due diligence. Key to this effort are the signed Supplier Code of Conduct and frequent internal and third-party supplier sustainability audits, especially in ESG high-risk regions and encouraging suppliers to set their own ambitious climate targets

Furthermore, Metso cooperates with a number of non-governmental organizations (NGOs), Metso's sponsorships and donations are focused on environmental protection and conservation, safety programs, and natural disaster relief. For example, Metso has "Metso Volunteers", a program to activate and engage people to volunteer in their local communities. In addition, as a responsible corporate citizen Metso works closely with local communities around its operating sites and creates social value to local communities by providing employment opportunities and supporting corporate social responsibility projects that bring measurable benefits to local communities. Community projects are based on local needs, defined through discussions with local communities and aim to integrate volunteer work.

10. Looking forward

Sustainability is and will remain a strategic priority for Metso. Our Metso Plus offering and innovations for our customers and minimizing harmful environmental impacts in our own operations, logistics, and supply chain demonstrates our purpose to enable sustainable modern life. Through partnerships with customers, suppliers and communities, we are working towards a more sustainable future. This includes addressing challenges such as modern slavery.

Metso acknowledges that modern slavery is an ongoing challenge for our industry and is committed to reducing and ultimately eliminating such practices. Metso will continue to further develop and improve its approach to modern slavery in its own operations and in cooperation with our suppliers, as noted in this statement and as otherwise required or considered appropriate by Metso. Metso follows actively the development of human rights due diligence requirements in various jurisdictions and will regularly review its due diligence practices and human rights policy and procedures.

10.1. Consultation

This statement has been prepared by an internal work group with representatives from various functions, including Procurement Excellence, Legal, Sustainability, Compliance, Risk Management, Business Analytics, and Communications, and with management representatives from the Australian, Canadian, Norwegian, United Kingdom and U.S. operations, all under the guidance of Metso's General Counsel, Chief Growth Officer and Chief Financial Officer.

11. Summary

The following table summarizes how Metso approaches the requirements of the Australian Modern Slavery Act 2018, the United Kingdom's Modern Slavery Act 2015, the Norwegian Transparency Act 2021, the Canadian Modern Slavery Act 2023 and the Californian Transparency in Supply Chains Act 2012. Further details are provided in this statement as indicated below.
